TECHNICAL OVERVIEW	22

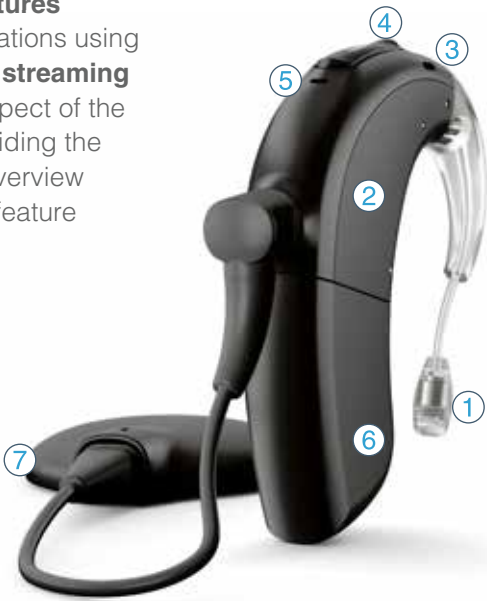

MARVEL CI SOUND PROCESSORS DESIGNED WITH YOU IN MIND

Naída™ CI M and Sky CI™ M sound processors are part of an innovative, advanced cochlear implant system that delivers a brilliant hearing experience. This means powerful sound and excellent hearing in any environment, along with flexibility and durability that allows you or your children to meet all of life’s adventures head-on.

Naída CI M and Sky CI M offer a wide **variety of features** designed to improve hearing across all listening situations using **AutoSense OS™ 3.0 operating system and direct streaming** from a multitude of devices. Rest assured—every aspect of the system is designed to be seamlessly operated, providing the ultimate ease of use. Please refer to the Technical Overview (page 22) for additional information on product and feature differentiation.

POWER OPTIONS

You or your child will be wearing the Marvel CI sound processor nearly around the clock. This calls for a device that is comfortable, discreet, and which will not interfere with your favourite activities.

Marvel CI has a range of new battery options to suit all lifestyles, providing a **unique ergonomic housing** for a comfortable and secure fit: with the M Batteries, Small, Medium and Large, the bottom of the processor curves against the contour of the ear, keeping the device secure and conveniently tucked away. The new M Waterproof Battery is small, lightweight and ideal for swimming and outdoor activities.

The graph below illustrates the weight, the capacity and the average operating hours of each M Battery option.

AB REMOTE APP FOR BETTER CONTROL

Being able to easily control your sound processor means you or your child will always get the best sound possible. Our AB Remote app makes this easy and discreet by providing convenient management of all your hearing devices on one smartphone. The AB Remote app is available for free on both iOS and Android devices.

BUILT-IN CONNECTIVITY

Unlike any other cochlear implant platform, Naída CI M and Sky CI M offer the ability to stream calls and audio directly from virtually every smartphone and Bluetooth®-enabled device. Our **Phonak RogerDirect™ technology** boosts hearing performance in challenging listening situations, without extra devices attached to the sound processor.

RogerDirect is a Marvel feature that allows the Roger microphones to stream directly to the hearing device without having to attach an external receiver. Compared to AB's previous generation, the Marvel CI sound processors provide full Roger Performance & Connectivity being **23% shorter** and **34% lighter**.

BIMODAL SOLUTION

At Advanced Bionics, we're working every day to ensure that your and your child's unique hearing needs are met. Together with Phonak, we're part of the largest and most innovative hearing company dedicated to delivering solutions for patients with every type and degree of hearing loss.

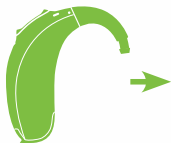

If you use a cochlear implant and a hearing aid, you can have a Naída CI M or a Sky CI M on one ear and a **Phonak Naída™ Link M** or a **Phonak Sky™ Link M** hearing aid on the other ear. This customised approach is designed to ensure both devices will process sounds in the same way. Together, they provide consistent sound experiences and excellent speech understanding, unlike having a hearing aid and a cochlear implant that are not designed to work together.

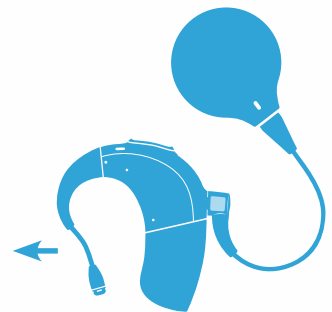

Designed to work together

For individuals with some hearing in one ear, wearing the right hearing aid helps them to hear even better than with a CI alone. Wearing a Naída Link M together with Naída CI M gives you a consistent sound impression between ears, and allows you to adjust both devices with a single control.

The same is true for Sky Link M and Sky CI M.

PROGRAMMES AND FEATURES OVERVIEW

PROGRAMME / FEATURE		NAÍDA CI M90	SKY CI M90
AUTOSENSE OS 3.0 / AUTOSENSE SKY OS 3.0			
Calm Situation	Use for speech understanding and listening comfort in 1:1 conversations and for quiet environments.	●	●
Speech in Noise	Use for speech understanding and comfort when in noisy environments and groups.	●	●
Comfort in Noise	Use for listening comfort in noisy situations when no speech is present.	●	●
Music	Program settings for a more natural music experience.	●	●
Speech in Loud Noise	Use for speech understanding when in noisy and crowded environments. The StereoZoom feature in the programme allows a particular focus on the sound source in front of the listener.	●	●
Speech in Car	Optimised settings designed for a stable listening environment in the car (awareness).	●	●
Comfort in Echo	Use this programme for comfortable speech understanding in environments that have a lot of echo/reverberation.	●	●
Streamed Speech	Used when streaming speech from A2DP or AirStream.	●	●
Streamed Music	Used when streaming music from A2DP or Airstream.	●	●
ADDITIONAL MANUAL PROGRAMMES (max 4)			
Speech in 360°	This programme enables the selection of the listening direction in situations where the sound source cannot be faced. Focus direction can be fixed or automatic.	●	●
DuoPhone	The key feature DuoPhone (M90/Sky only) streams the signal in real-time to the other ear so the caller's voice is heard in both ears without the need for any additional accessories.	●	●
Off-Ear Programme	Use this programme when the device is configured for off-ear wearing using a headpiece microphone.	●	●
Custom Programme	–	●	●
STREAMING PROGRAMMES			
RogerDirect + mic	Combines input from Roger microphone source and device microphones.	●	●
Phone call + mic	Combines input from streaming phone source and device microphones.	●	●
PartnerMic + Mic	Combines input from streaming phone source and device microphones.	●	●

PROGRAMME / FEATURE		NAÍDA CI M90	SKY CI M90
SIGNATURE FEATURES			
UltraZoom	UltraZoom is the adaptive multi-channel beamforming technology, which improves speech intelligibility within noisy situations.	●	●
UZ + SNR-Boost	Designed to improve SNR in an UltraZoom program by providing further attenuation of sounds from the back.	●	●
StereoZoom	StereoZoom is an adaptive, multi-channel beamforming technology that adapts to moving and asymmetric noise sources. It requires compatible bilateral devices.	●	●
DuoPhone	Automatically streams the caller's voice to the other ear, so that the voice is heard in both ears simultaneously.	●	●
Real Ear Sound	Real Ear Sound simulates the performance characteristics of the T-Mic.	●	●
WindBlock	WindBlock utilises a wind identification and classification system. The powerful, adaptive algorithm automatically suppresses wind noise.	●	●
EchoBlock	EchoBlock is designed for reverberant environments like large assembly halls, places of worship, and rooms with reflective surfaces. EchoBlock works by instantly removing the disturbing reflections of the reverberant sound.	●	●
SoundRelax	SoundRelax instantly and accurately identifies impulse sounds and applies gain reduction relative to the original peak signal characteristics. SoundRelax cushions otherwise unpleasant impulse sounds.	●	●
QuickSync	One-touch controls two. The instantaneous broadband transfer of data between two instruments ensures that volume and program settings are always balanced and synchronised. One-touch on the program selection button or volume control results in an instant identical change in the other instrument.	●	●
Environmental balance	Volume modification capability that allows clients to adjust the volume of the streamed signal versus the surrounding environmental sounds by the press of the volume control.	●	●
